

## Scenario #2 TikTok

Name: Alex Smetana

- 1) What is the human work that the technology is augmenting?

TikTok helps augment human work of communication between humans, by allowing for easier communication between individual(s). Users can send and stream videos to each other removing all human contact of, while also serving as an entertainment platform, augmenting the humans. Finally, it augments the advertisement process.

- 2) Does the technology supplement, support, or enhance that work? Why?

TikTok helps support users work because it provides a platform for which users can share and stream videos which allows for a user to grow in popularity. It also supports big business as it is a form of advertising. If a user has enough views and followers, it can provide an income to that TikToker.

- 3) What must be secured? You don't have to get all of them, and you don't need to be specific.

Users' logins, passwords, account, content posted, location, payment information, must all be secured on TikTok.

- 4) What is the likely result of a failure or compromise of that system?

If an individual's account is hacked this can lead to information being exposed. A person might lose access to they're account, which could lead to a loss of money. Using TikTok increases a user's digital footprint and could lead to more phishing scams in the future.
